Response to Clarifications for the Revised Scope of Work

Date	16 September 2026
To	Mr. Nirav Bhadani, Softqube Technologies LLC
From	Wavy Solutions / XWavy
Subject	Clarifications requested before issuance of the revised proposal

Dear Nirav,

Thank you for your detailed review and for confirming the items already accepted within the project. Please find below our responses to the requested clarifications. These decisions are intended to keep the first release commercially focused, technically manageable and ready for future expansion.

Please prepare the revised Scope of Work with every additional module priced and scheduled separately. No item should be treated as approved merely because it appears in the revised proposal; inclusion in the first release will be confirmed by Wavy Solutions in writing.

1. Language

1. Does the bilingual requirement extend to user-submitted content?

The platform interface, admin panel, system messages, emails, notifications and legal pages must be fully available in Arabic and English, including complete RTL support. User-submitted opportunities, investor mandates and notes do not have to be entered in both languages. A user may submit content in either Arabic or English. Automated or assisted translation may be proposed as a separately priced Phase 2 option.

2. Who will provide the Arabic translation?

Wavy Solutions will provide or approve the final Arabic wording for the interface, legal documents and transactional emails. Your team will be responsible for implementing the approved Arabic content correctly, including RTL layouts, responsive behavior and bilingual testing.

3. Default language and search indexing

Arabic should be the default language for visitors detected in Saudi Arabia, with a clearly visible language switcher. The platform must use separate, indexable language URLs, such as /ar and /en, together with appropriate multilingual SEO tags.

2. Payments

1. Worldwide payment acceptance

XWavy is an international platform serving subscribers worldwide. Please propose a global payment solution for international customers, Visa and Mastercard credit and debit cards issued internationally. The architecture must support multi-currency pricing and checkout; supported billing and settlement currencies, fees and country exclusions must be specified in your proposal. Payment acceptance must be designed around international Visa and Mastercard subscriptions, without a Saudi-specific payment method requirement.

2. Recurring subscriptions

Automatic recurring subscription billing is a core Version 1 requirement for supported international payment methods. Include subscription activation, automatic renewal, cancellation, payment-status updates, failed-payment handling and customer notifications. Please confirm recurring billing support for international Visa and Mastercard cards and clearly identify any issuer or country restrictions.

3. Merchant entity and account ownership

The merchant account must be owned and controlled by the designated Wavy Solutions legal entity. We will confirm the contracting entity, registration country, banking details and account status before onboarding. Do not assume that the merchant must be registered in Saudi Arabia. Please confirm provider eligibility for the selected entity and distinguish merchant onboarding eligibility from the countries where customers can pay.

4. Provider recommendation and billing functionality

There is no instruction to move away from Stripe. Please evaluate Stripe or another suitable global provider against the above requirements and recommend a named provider, subject to confirmed merchant eligibility. Prefer the provider's native subscription billing and customer portal where suitable. Itemise the integration cost, any custom billing work and ongoing provider charges, and identify geographic or payment-method limitations before final approval.

3. VAT and Invoicing

1. Tax and invoice requirements

Tax and invoicing configuration must follow the selected selling entity and the markets served. Do not assume Saudi VAT or ZATCA invoicing is the default for all subscriptions. Please price any jurisdiction-specific invoicing integration separately. Wavy Solutions will confirm the applicable requirements with its tax adviser before implementation; any mandatory integration must be included before launch.

2. Tax registration and accounting integration

Wavy Solutions will provide the selected entity's registration and invoicing details before production configuration. No accounting-system integration is required in Version 1 unless separately approved. Please provide a standard export of invoice and payment records in CSV or Excel format.

3. International customers

Yes. XWavy will serve customers worldwide, subject to the selected provider's supported territories. Capture customer billing country, business or individual status and relevant tax information. Invoices must identify the selling entity, billing currency and applicable tax treatment. Final tax configuration will be approved by Wavy Solutions' tax adviser before launch.

4. Investor Verification

1. Should verification block payment?

No. Verification is a status and trust badge and must not block registration or subscription payment. However, access to sensitive investor features may be restricted until verification is approved.

2. Manual review or national identity integration

Version 1 will use manual admin verification based on identity or company documents, professional email, company website, LinkedIn profile and supporting information. Nafath, Wathq or similar national-service integrations are not required in Version 1 and may be quoted separately for Phase 2.

3. Reviewer and turnaround time

Reviews will be performed by authorised Wavy Solutions/XWavy administrators. The internal target will be two business days after receipt of complete documents. No public guaranteed service level should be displayed at launch; the interface may state that review normally takes two business days.

5. Investor Profiles and Platform Model

1. Who may initiate contact?

A subscribed investor may contact opportunity owners in accordance with the permissions of the selected subscription plan. An innovator or opportunity owner must not receive an investor's direct contact details or send unrestricted direct messages. They may send one structured introduction or interest request, which the investor may accept or decline. This protects the paid investor model and limits spam.

2. Investor mandates

Yes. Investor mandates must pass admin moderation before publication, using a workflow equivalent to opportunity moderation. Published mandates should display only the information approved for public visibility.

6. Existing Data

1. Current website data

All information currently displayed on the website is dummy content added for demonstration and visual presentation only. It does not represent real users, investors or live opportunities and has no migration value.

2. Migration scope

No migration of existing accounts, profiles, opportunities or other demonstration content is required. Please exclude data migration and migration-audit work from the scope, price and timeline. The new platform should launch with a clean production database; any test content used during development must be removed before launch.

3. Database access and password resets

A database export or access for migration is not required. Forced password resets for old accounts are also unnecessary because no existing accounts will be migrated.

4. Category structure

Please allow for twelve top-level categories. Wavy Solutions will supply the final category names separately; no previously suggested list should be treated as approved. Category names and descriptions should be editable by an administrator.

7. Hosting, Compliance and Design

1. Saudi PDPL and hosting location

The system must be designed to comply with the Saudi Personal Data Protection Law and applicable cross-border data-transfer requirements. At this stage, do not assume that every component must be hosted inside Saudi Arabia. Please provide a Saudi-hosted option as the preferred production option and, where relevant, a compliant international-cloud alternative, showing the cost and technical differences. The final hosting decision will be made before production deployment following legal review.

2. Ownership of service accounts

All production accounts - including hosting, domain/DNS, payment gateway, transactional email, analytics, storage, monitoring and backups - must be opened in and controlled by Wavy Solutions/XWavy. Softqube may receive role-based access only for implementation and support. All credentials, configuration, deployment files and documentation must be handed over.

3. UI/UX design responsibility

Softqube will be responsible for the complete responsive UI/UX design of the agreed Version 1 scope in Arabic and English, including RTL behavior and the admin panel. Designs and prototypes must be submitted to Wavy Solutions for approval before development of each relevant milestone.

4. Analytics

Google Analytics 4 is acceptable for launch, provided that consent management, privacy notices, data-retention settings and applicable compliance controls are implemented. Please also include basic platform-side business reports for users, opportunities, subscriptions, payments, verification and moderation. Any advanced BI dashboard should be priced separately.

8. Process and Acceptance

1. Single decision-maker

Mr. Amr Khamis is the single point of approval on behalf of Wavy Solutions/XWavy.

2. Review turnaround

Wavy Solutions will target written review within three business days after receipt of a complete milestone package. A milestone package must include the relevant working build, test access, design or documentation, and a clear acceptance checklist. The review period will begin only when the package is complete.

3. Milestone acceptance

We agree that acceptance may be mapped to delivery milestones rather than strictly to modules. The revised proposal must define the deliverables, acceptance criteria, dependencies, review period and payment amount for every milestone. Silence or partial testing must not be treated as automatic acceptance unless expressly agreed in the final contract.

9. Requirements for the Revised Proposal

1	A clear Version 1 base scope, price and delivery schedule.
2	A separate price and schedule for every additional module or material scope extension.
3	Explicit assumptions, client dependencies and exclusions for each item.
4	A recommended release split between Version 1 and Phase 2.
5	Defined milestones, acceptance criteria and payment schedule.
6	The length and coverage of the post-launch defect warranty, plus optional maintenance terms.
7	The proposed technology stack, hosting architecture, backup approach, security testing and handover package.

We appreciate the constructive review and look forward to receiving the revised Scope of Work and commercial proposal on the above basis.

Sincerely,

Amr Khamis
General Manager
Wavy Solutions / XWavy
